Summary Flutter developer who has published apps on Google Play, built with Clean Architecture and Bloc/Cubit or Riverpod. Works with Firebase, REST APIs, payment gateways (Stripe, PayPal, Paymob) and on-device machine learning (TensorFlow Lite), plus basic Node.js/Express backends.

Professional Experience

Freelance Flutter Developer 2024 – Present

- Built and published Flutter apps on Google Play: Plant Health & Farming Assistant, and a quiz app with a leaderboard.
- Integrated REST APIs with authentication and payment gateways (Stripe, PayPal, Paymob).
- Structured apps with Clean Architecture and Bloc/Cubit or Riverpod, depending on the project.
- Built an on-device plant disease classifier with TensorFlow Lite and Firebase (MyFarm AI Analyzer).
- Worked with backend developers on API design and integration.
- Delivered production-ready Flutter applications with scalable architecture.

Selected Projects

MyFarm — AI Plant Health & Farming Assistant | Client Project: **oct, 2026 – Present**

Freelance Flutter Mobile Application

- Developed a Flutter mobile app for plant identification and health analysis from images.
- Integrated the Plant.id v3 REST API to analyze plant images and display disease results, confidence scores, and localized care information.
- Structured the plant-analysis feature using Clean Architecture principles, with repositories and use cases; managed app state and asynchronous flows using Bloc/Cubit and GetX.
- Implemented Firebase Authentication and Cloud Firestore features, including user data and collaborative group notes.
- Added Arabic disease information and text-to-speech, along with farming utilities such as weather updates, cached data, and task management.

Tech: Flutter, Dart, REST APIs, Plant.id API, Firebase Authentication, Cloud Firestore, Bloc/Cubit, Hive, Clean Architecture

Freelance Flutter Developer | Client Project: **sep, 2025**

Bible Learning & Quiz App | Flutter, Dart, Firebase, GetX Google Play

- Developed features for a cross-platform app that supports Bible reading, interactive quizzes, and exam management.
- Implemented email/password and Google sign-in, user profiles, and role-based access flows.
- Built quiz and exam features, including Bible-verse activities, exam scheduling, and user result tracking.
- Integrated Firebase Authentication and Cloud Firestore for authentication and app data.
- Developed management screens for quiz content and organizational data, including churches and chapters.
- Added Excel export for exam results, along with audio feedback and responsive Arabic interfaces.
- Used a feature-based structure with Clean Architecture boundaries in modular parts of the app.

Tech: Flutter, Dart, Firebase Authentication, Cloud Firestore, GetX, Google Sign-In, Excel export, audio playback, responsive UI.

Tasks Management App — Clean Architecture: GitHub

- Developed a Flutter task management application using Clean Architecture and BLoC/Cubit.
- Implemented local task persistence with SQLite, repository-based data access, and reusable UI components.
- Managed application states including loading, success, error, and empty states.

Tech: *Flutter, Dart, BLoC/Cubit, SQLite, Clean Architecture, Repository Pattern*

Scholar Chat — Real-Time Messaging App: GitHub

- Built a Flutter chat application with Firebase Authentication and Cloud Firestore.
- Implemented email/password authentication and real-time message streaming.
- Created reusable chat components, form validation, and separate message styles for senders.

Tech: *Flutter, Dart, Firebase Authentication, Cloud Firestore*

Checkout Payment App — Stripe & Paymob: GitHub

- Integrated Stripe and Paymob payment gateways into Flutter applications, implementing payment flows and REST API communication.
- Applied Clean Architecture and Bloc/Cubit for state management, with responsive UI and loading/error handling.

Tech: Flutter, Dart, Stripe API, Paymob API, REST APIs, Bloc/Cubit, Clean Architecture

Story App:

- Developed a Flutter application to browse products from the Fake Store API using RESTful HTTP requests.
- Built a two-column product grid and product update form, with loading and error states.
- Implemented API services for retrieving, adding, and updating products, as well as loading product categories.
- Created typed Dart models to parse product and rating JSON, handling numeric or string prices and optional rating data.
- Organized the code into reusable core components and feature-based UI, and added model parsing tests.

Tech*: Flutter, Dart, REST APIs, HTTP, JSON, Material UI, Fake Store API.*

News App:

- Developed a Flutter news application as a practical project, including API-driven content and category/search UI; used Cubit-based state management.

Tech*: Flutter, Dart, REST API, Dio, Cubit*

Education

Education: Bachelor of Science in Computers and Information.

Arab Open University (AOU Egypt). GPA: 2.73 (Very Good) Link To Certificate sep 2019 – Jan 2023

Skilles

Skilles : Flutter, Dart, Kotlin (Android Native), iOS (Intermediate) FullStack

Flutter, Dart, Bloc / Cubit, Clean Architecture, REST APIs, Firebase, Node.js, Express (Basics)
